

**A PebbleCreek Education Club
Monday Morning Lecture Series Presentation**

THE END of the WORLD

Is there time to prevent the demise of life as we know it?

Guy McPherson

Professor Emeritus of Natural Resources—The University of Arizona

Monday, March 22, 2010

10AM—Tuscany Theater

Admission: \$3 (At the door)

for more info contact Dennis DeFrain
at 535-3102 or dcdfrain@cox.net

According to Dr. McPherson, every bit of dire news is met by the same political response. He asks if there is any doubt that we will try to kill every species on the planet, including our own, by the middle of this century? He says that it's no longer merely the lives of our grandchildren we're talking about but the lives of our children and us. About five years ago, he was elated to learn about a hail-Mary pass that just might allow our persistence for a few more generations—but you'll have to come to his presentation to learn what it is!

Guy McPherson is an energetic speaker and talented moderator. He has appeared before countless audiences to speak about the two primary consequences of our fossil-fuel addiction: global climate change and energy decline. Because these phenomena impact every aspect of life on Earth, his talks reach a wide variety of audiences. Guy is professor emeritus of natural resources and the environment at the University of Arizona, where he taught and conducted research for 20 years. He has authored nine books and published well over 100 articles. His scholarly work has for many years focused on conservation of biological diversity. He lives in an off-grid, straw-bale house where he puts into practice his lifelong interest in sustainable living via organic gardening, raising small animals for eggs and milk, and working with members of his rural community.
